

[We see the exterior of a dental practice. In the front yard well-maintained landscaping with attractive looking bushes growing out of a bed of decorative rocks. The building itself features a ramp leading up a covered entryway. Signs on the window and amongst the colorful bushes read “Shull Family Dentistry”.]

[We move to a close up show of the “Shull Family Dentistry” logo sign, with watercolor style trees behind the words, hanging on the front window of the building.]

[A shot of the reception area shows a hardwood floor, a textured front desk, several upholstered chairs, artwork on the wall, and bright lighting.]

(Dr. Shull)

Dr. Levi Shull, owner here of Shull Family Dentistry. I've been in practice for ten years and we've been in this location since 2019.

[We see Dr. Shull, standing in the hallway of his dental practice and speaking with a calm and friendly demeanor. A graphic in the lower left corner identifies him as “Levi Shull, DMD”.]

(Dr. Shull)

We are not an office that is going to sit you down and special room and grill you about, you know, what you need. We aren't salespeople, that's not how I subscribe to dentistry. I always like to give my patients options and we leave the decisions up to them.

[A female patient stands at the front desk seen earlier, speaking with two smiling receptionists behind the desk]

[A female assistant leads the patient down a hallway through the practice.

(Dr. Shull)

We cover the swath from regular routine fillings, exams, cleanings to more complicated procedures like Invisalign. We are also able to place implants here as well.

[In an examination room, the patient is in the exam chair with Dr. Shull and the assistant sitting on either side of her. Dr. Shull speaks to the patient with a friendly and upbeat attitude, touching her on the shoulder.]

[A shot of the patient shows her being reclined in the exam chair as she smiles. She is wearing sunglasses provided by the practice to shield her eyes from the bright exam light]

[Dr. Shull, aided by the assistant and sleek dental technology, conducts an exam on the patient]

[We return to the shot of Dr. Shull speaking]

(Dr. Shull)

I have brought for us quite a few improvements to the office that have kind of pushed dentistry into the future to make our patients experiences more comfortable, but also to lead us to significantly better results, better outcomes for them as well.

[We see a digital x-ray machine being operated on the patient]

[We transition to a shot of a 3D scan of a patient's teeth]

[A wider shot reveals the assistant using the 3D scanning wand in the patient's mouth. A screen in the background shows the 3D image of her teeth as it's being captured]

[Dr. Shull sits at a different computer screen, this one showing the digital x-ray of the patient's teeth and parts of her skull]

(Dr. Shull)

We started with digital impressions, so for a lot of our cases, we don't need to take big, big goopy impressions out and gag you. We take a digital scan of your teeth. We're able to, in real time, show our patients what their final outcome is potentially going to look like.

[We return to the shot of Dr. Shull speaking]

(Dr. Shull)

Our newest addition to the office and probably what I'm most proud of is the Fotona Lightwalker laser.

[We see a close up view of the Fotona laser device's startup display screen]

[A wider shot of the Fotona laser device shows the screen and instruments used for dental procedures]

[We see a close up shot of the side of the patient's face with the Fotona laser being held by one of the dental professionals. It scans the side of her face, projecting a green light onto her cheek but never making physical contact.]

(Dr. Shull)

We found that we were able to do about 95% of our fillings without anesthetic, without giving our patients a shot, which is a huge boon to them. Comfort wise, anxiety wise, it's really a game changer for dentistry.

[We return to the shot of Dr. Shull speaking]

(Dr. Shull)

But beyond that, we're also able to do surgeries much more comfortably, end up with much better outcomes afterwards.

[We transition to a series of slow panning shots providing a tour of the office. First, a shot from behind the front desk showing the clean waiting room with framed nature photography on the walls]

[Next, a wide shot of the bright, open examination room]

[Another view of the examination area shows two separate dental chairs and the surrounding equipment]

(Dr. Shull)

We want to not bring technology in just for technology sake, but look for things that are really enhancing that patient experience.

[We return to the shot of Dr. Shull speaking]

(Dr. Shull)

We're not anxious about treating somebody. We're not anxious about causing someone pain because we know we have the ability to do things in a way that are much more comfortable for them.

[We see a close up shot of the female assistant seen earlier, followed by another female dental assistant]

[Another shot of the practice exterior provides a closer look at the landscaping and "Shill Family Dentistry" signage]

(Dr. Shull)

Seeing patients leave satisfied and happy really make me proud as a practitioner of not just myself, but the staff in general. They always do a great job of making people feel like we care about them.

[We return to the shot of Dr. Shull speaking]

(Dr. Shull)

Because we do and it's obvious in the way that we interact and the way that we treat them.

[A final graphic slide displays the "Shull Family Dental" logo along with the phone number, 503-362-5019, and website, [www.shulldentistry.com](http://www.shulldentistry.com)]
